Information about the Locks

On the SôneRiver, between St-Jean-de-Losneand Mâcon, the locks are automatic and operated by a lock keeper.

On the SeilleRiver, the locks are manual and operated by the boaters.

Most of the locks in this region are automatic and operated by the boaters themselves; they are triggered by rotating a “percherod” suspended above the stream or by passing in front of a sensor located on the bank.
